**Goal:** Develop software such as desktop applications, web services with the best user experience and improve the functionality of systems adhering to normalization standards.

## Experience

[DeepTure](#) – Software engineer

May 2018 – Jun 2021

I participated in the development, design, and implementation of functions for web systems, always keeping in mind the standards and good practices for the scalability of the system.

### tasks involving this role

Configure the server to start the development of a web system with express and node.js	System mockup using html and CSS with the help of bootstrap, system with responsive interface
Design database based on the needs of the system and documentation	Implementation of an information exchange system between user-server-user powered by Socket.io
Configure stored functions, triggers, and tables in MySQL	Implementation of AJAX requests to improve the user experience powered by jQuery
system interface design with Adobe XD	Token deployment for secure logins with JWT
Data graphs displayed with morris.js	Interpretation of data with the help of machine learning in python with SKlearn
Implementation of account recovery emails	Development of a desktop application to complement the system with java as a language

## Technologies and tools

- Java
  - JavaScript
  - Python
  - MySQL
  - Bootstrap
  - jQuery
- HTML
  - CSS
  - React.js
  - JSP
  - Express
  - SQLserver

## Education

[Instituto Politécnico Nacional](#)  
Programming Technician

2019 - 2021

[Instituto Politécnico Nacional](#)  
Artificial intelligence engineering

2021 - Present

## Certifications

Web development I	Abr 2020
Web development II	Abr 2020
Cybersecurity in teleworking	Jun 2021
Digital Marketing Fundamentals	Jul 2021

## Aptitudes

- Empathy
- High responsibility level

## Areas of interest

- Security
- Mobile development
- User experience
